## Entrust Corporate Profile

### Identity-Based Security

As a trusted security expert, Entrust provides comprehensive identity-based security solutions that safeguard enterprises, consumers, citizens and websites. More than 4,000 organizations in 60 countries across the globe leverage Entrust's world-class security solutions, which include strong authentication, physical and logical access, digital certificates, public key infrastructure (PKI), citizen eID, employee credentialing, ePassport security, email security, SSL and more.

**Trust in identities.** Security begins when organizations know and trust the identity of those involved in a given transaction. However, in today's world, the story of identity no longer solely focuses on individual people — increasingly, it's about devices and applications — ranging from personal mobile devices to ATMs and even electrical meters.

Basic passwords do not provide the level of digital security that modern organizations need to combat the rising number of sophisticated threats targeted against both physical and logical infrastructures. By leveraging a versatile authentication platform, governments, financial institutions and enterprises can better adjust digital security based on evolving threats, new industry regulation or changes within their organization.

From online banking, controlling building access to even securing border-crossings, Entrust's proven identity-based approach protects and promotes trust associated with digital identities.

**Global respect.** Elite organizations and government agencies — INTERPOL, U.S. Department of State, NASA, U.K. Ministry of Defence, Bank of New Zealand, Banco Santander, DnB NOR, Lloyds TSB, Expedia and more — look to Entrust to help protect and secure the most sensitive of assets.

### Identity-Based Security Solutions

Entrust's versatile identity-based security solutions can be tailored to protect digital identities and information at multiple points to address ever-evolving threats to physical, logical and mobile environments. As organizations seek stronger, cost-effective security solutions, Entrust is able to deliver a proven product portfolio that is easy to use, quick to deploy, and seamlessly provides security within the enterprise and protects the digital identities of consumers and citizens from online fraud.

### Strong Authentication

Entrust offers a comprehensive authentication platform, including certificate-based authentication capabilities, which allow organizations to set stronger standards for physical, logical and mobile access. The strength of authentication also can be adjusted to account for risk, usability and cost, rather than forcing all users to authenticate based on a static policy.

### What we do

Entrust provides identity-based security solutions for enterprise, consumer, citizen eID and website markets that:

- Protect digital identities through strong authentication of people, devices and applications
- Offer a combination of physical, logical and mobile authentication solutions via a single platform
- Simplify issuance and management of smartcards
- Enable governments to deploy advanced credentialing, citizen eID and managed borders projects
- Safeguard vital proprietary assets through encryption
- Secure Web transactions via SSL certificates

### Who we secure

- 9 of the top 10 e-governments worldwide
- 8 of the top 10 global telecom companies
- 8 of the top 10 global aerospace and defense companies
- 7 of the top 10 global commercial banks
- 7 of the top 10 global pharmaceutical companies
- 4 of the top 5 global petroleum companies

# < Let's Talk

**Entrust IdentityGuard** is an award-winning versatile authentication platform which includes the broadest range of authenticators on the market. It offers cost-effective authentication solutions for wide-scale deployment to a spectrum of user groups ranging from a select number of employees to millions of customers.

The platform goes a step further, setting a new standard for physical and logical access control by also seamlessly integrating card and certificate management.

In addition, Entrust IdentityGuard addresses the growing number of personal mobile devices used in business by offering the only authentication platform to fully enable today's leading mobile platforms through the use of soft tokens, transaction verification and certificate-based authentication. Additional products include:

- **Entrust IdentityGuard Mobile:** An innovative mobile identity application for easy-to-use strong authentication and transaction verification
- **Entrust Smart Credentialing:** End-to-end service provides multipurpose smartcards for enterprise, citizen and government environments
- **Entrust TransactionGuard:** For real-time, zero-touch fraud detection

## Public Key Infrastructure & Digital Certificates

A pioneer of public key infrastructure (PKI), Entrust offers customers flexible and manageable solutions that leverage the unparalleled security capabilities of PKI — delivered as software or as a cost-effective, hands-off hosted service.

From secure email, network folder encryption, ePassport security, government credentialing projects, strong authentication and digital signatures, PKI-based technology represents a collection of the most valuable solutions Entrust implements for customers across the globe.

## About Entrust

A trusted provider of identity-based security solutions, Entrust empowers enterprises, governments, financial institutions, citizens and websites in more than 4,000 organizations spanning 60 countries. Entrust's customer-centric focus is the foundation to delivering organizations an unmatched level of security, trust and value. For strong authentication, credentialing, physical and logical access, mobile security, digital certificates, SSL and PKI, call 888-690-2424, email [entrust@entrust.com](mailto:entrust@entrust.com) or visit [www.entrust.com](http://www.entrust.com). Let's talk.
