

Securing Your Digital Life

Entrust Zero Touch FFIEC Compliance Solution Overview

The Entrust Zero Touch FFIEC Compliance Solution is a special promotional offer combining online fraud detection with multifactor authentication. This solution is designed to be implemented rapidly and with Zero Touch to existing applications or the customer experience. **Solution implementations started between now and October 16, 2006, will qualify to receive a warranty that the offered solutions will meet the FFIEC guidelines for online authentication by the December 31, 2006 deadline.***

Zero Touch Fraud Detection™

The Zero Touch Fraud Detection platform operates in real time to detect potentially fraudulent online transactions. It requires no invasive integration with existing banking applications, nor does it impact the customer experience. This solution consists of Real Time e-Fraud Detector, eFraudMart, and key fraud signatures ready for deployment.

Multifactor Authentication

Entrust IdentityGuard is an open multifactor authentication platform that includes a comprehensive set of authentication capabilities for identifying users. Its flexible deployment options help enable organizations to match strong authentication methods to the level of risk they have determined to be associated with different types of users, transactions, or applications. The Entrust IdentityGuard platform includes a range of multifactor authentication methods including machine fingerprinting, questions and answers, out-of-band one-time passcode, and mutual authentication through picture replay. It also delivers support for physical second factor authentication, including Entrust's patented grid card authentication technique as well as one-time passcode tokens.

Implementation Options

Financial institutions have differing security needs so Entrust, working with its partner IBM Global Business Services, provides flexible implementation options. With this solution, customers have the option of deploying a fraud detection and multifactor authentication solution consisting of both Entrust Zero Touch Fraud Detection and Entrust IdentityGuard. Or, customers may deploy the Entrust Zero Touch Fraud Detection platform alone.

* Limited warranty subject to additional terms and conditions.

Solution Benefits
